Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Actual layout determined in field as necessary to accommodate anticipated number of washout.
3. Contractor shall be responsible for washout removal once washout operation have ceased.

Concrete Washout
Prepared By: JH       Scale: NTS       Revisions:
Checked By: TR - DW - JL
Date: 02-25-2016       Page 1
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Place construction entrance in accordance with the approved plan. Vehicles must travel over the entire length of the construction entrance. Use minimum length of 50 feet. Flare construction entrance ten feet minimum at each side of the existing road to provide a turning radius.
3. Width: Not less than full width of all points of ingress/egress.
4. Pipe all surface water flowing to or diverted toward the construction entrance under the entrance, maintaining positive drainage. Protect pipe installed through the construction entrance with a mountable berm with 5:1 slopes and a minimum of 12 inches of stone over the pipe. Provide pipe as specified on approved plan. When the construction entrance is located at a high spot and has no drainage to convey, a pipe is not necessary. A mountable berm is required where necessary to prevent runoff from flowing into street and/or to provide additional cover to protect pipe.
5. Stone Size: As required to be effective but not less than three to five inch minimum open graded rock.
6. Prepare subgrade and place nonwoven geotextile over the entire area prior to placing of stone.
7. Maintain entrance in a condition that minimizes tracking of sediment. Add stone or make other repairs as conditions demand to maintain clean surface, mountable berm, and specified dimensions. Immediately remove stone and/or sediment spilled, dropped, or tracked onto adjacent roadway by vacuuming, scraping, and/or sweeping.
8. Washing roadway to remove mud tracked onto pavement is not acceptable unless wash water is directed to an approved sediment control practice.
9. Maintenance: The entrance shall be maintained in a condition that will prevent tracking or flowing of sediment onto Public Right-of-Way. This may require periodic top dressing with additional stone as conditions demand, as well as repair and clean out of any associated sediment removal devices. All sediment that is spilled, dropped, washed or tracked onto Public Right-of-Way must be removed immediately. Periodic inspections and maintenance shall be provided after each rain.

Construction Entrance
Prepared By: JH    Scale: NTS    Revisions:
Checked By: TR - DW - JL
Date: 02-25-2016    Page 2
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Inlet diversion shall only be used with the approval of the Engineer. Additional Inlet on Grade devices shall be used in conjunction with approved inlet diversions.
3. Inlet Diversion may be used with or without the Linear Sediment Barrier, subject to approval by the Engineer.
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. This method of Inlet Protection is applicable at curb inlets where ponding is in front of the structures and unprotected areas.
3. Depending on the opening of the inlet, the concrete block may have to be placed vertically.

Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Rock Ditch Check shall be removed after vegetation has sufficiently matured to protect the ditch or swales, as determined by the Engineer, or after ditch liner has been placed.
3. Ditch checks located adjacent to area inlets shall provide a minimum of 12 inches and a maximum of 18 inches of height above the inlet grade.
4. The predominate size of rock used shall range between four and 12 inches.
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. On all slopes greater than ten feet high, mid-slope runs of silt fence shall be provided.
3. For fabric silt fence, the minimum longitudinal splice overlap shall be two feet with a post at each end. The fabric shall be secured to posts.
4. Silt fence shall not be used on concentrated flows, across drainage ditches or drains. Instead ditch checks shall be used as shown on plans or as directed by Engineer.
5. One quarter (1/4) acre per 100 feet of fence with maximum length of 600 feet.
6. Drive support stakes to half of their length.
7. J-Hook minimum width of 20 feet with a ten foot length of fence turned uphill as shown, is recommended. Where space is limited narrower hooks may be used with a higher spacing frequency. J-Hooks shall be used when the silt fence is installed at an angle of 30 degrees or greater from parallel to the contours.

8. For concrete pavement see Joint Layout.
Joint Layout Details for Concrete Pavement

Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Longitudinal Joints shall be maximum spacing of 14 feet. Transverse joints shall be maximum spacing of 15 feet. Ratio length-to-width for slabs shall be 3 to 2 maximum.
3. Joints type "C" and "D" shall be sawed as soon as concrete can withstand raveling. All sawed joints shall be cleaned and filled with bituminous compound following sawing.
4. Use Type "A" or "B" Joint at end of days work.
5. Emergency transverse joints shall be Type "A" with #4 rebar 30" long at 24" centers.

Joint Types:
A - Longitudinal Construction joint
B - Planned Transverse Construction joint
C - Longitudinal Contraction joint
D - Transverse Contraction joint
E - Isolation joints
F - Pavement Connection

Prepared By: JH  Scale: NTS  Revisions:
Checked By: TR - DW - JL  Date: 02-25-2016  Page 15
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Saw cut depth shall be one quarter (1/4) of the pavement thickness (D).
3. Bars that are drilled shall be tightly set with epoxy filler, per APL.
4. Isolation joint filler shall consist of 3/4" preformed fiber expansion joint filler, per APL.
5. Thickened edge isolation joints shall be placed at "T" intersections and unsymmetrical intersections at locations shown on the Joint Layout Detail. Isolation joints shall be constructed adjacent to fixed objects when specified by the Engineer. Isolation joints placed at fixed objects do not require a thickened edge.
6. For Contraction and Isolation joints in sidewalks see City of Cape Girardeau Standard Specifications.
7. See APL for joint sealant material.
UPRIGHT 6" CURB AND GUTTER SECTION

LIP CURB AND GUTTER SECTION

Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Lip curb allowed on Local and Collector Streets only.
3. Concrete shall have 28 day minimum strength of 4000 PSI.
4. Upright curb must be used if sidewalk located less than 2.5 feet from back of curb.
5. A six (6") inch curb shall not be depressed over four and half (4 1/2") inches.
6. All curbs and gutters shall be placed monolithically.
7. Saw cut contraction joints for curb and gutter sections at 15 foot intervals or as directed by Engineer. Provide half (1/2) inch preformed expansion joints at 75 foot intervals and at ends of curb returns and all radius points.
8. See Street Sections regarding placement of base under curb and gutter.
9. Integral curb shall be at the same profile.
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. All excavations in City Right-of-Way require permits in conjunction with a three day notice prior to the start of work. Contractor shall be responsible for providing and maintaining traffic control during construction. All traffic control devices shall conform to the latest edition of the Manual on Uniform Traffic Control Devices (MUTCD) and the MoDOT Quality Standards for Temporary Traffic Control Devices.
3. All cuts in streets, curbs and sidewalks shall be sawed. Backfill shall be aggregate compacted to density equal to that of the surrounding materials.
4. Surface of the new patch shall conform to the grade that existed prior to excavation so as to leave the street surface smooth. Disturbed unpaved areas shall be leveled, seeded and mulched.
5. Non-emergency excavations shall occur from 8:30 AM to 4:00 PM week days. There shall be a 48 hour maximum "open time" for excavations before temporary or permanent patch is made. All openings shall be closed and the street opened for traffic by 4:00 PM daily.
6. Where it is necessary to leave an excavation open, such as for concrete curing in the bottom of manholes, a cover shall be provided and set over the opening that will support any load that may pass over the hole.
7. When an emergency occurs that requires excavation within City Right-of-Way and City offices are closed, the work may be done but the City shall be notified immediately when offices are re-opened.

Flexible Pavement Repair

Prepared By: JH  Scale: NTS  Revisions: 
Checked By: TR - DW - JL
Date: 02-25-2016  Page 18
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Concrete shall have 28 day minimum strength of 4000 PSI.
3. All excavations in City Right-of-Way require permits. Contractor shall be responsible for providing and maintaining traffic control during construction. All traffic control devices shall conform to the latest edition of the Manual on Uniform Traffic Control Devices (MUTCD) and the MoDOT Quality Standards for Temporary Traffic Control Devices.
4. All cuts in streets, curbs and sidewalks shall be sawed. Backfill shall be aggregate compacted to density equal to that of the surrounding materials.
5. Surface of the new patch shall conform to the grade that existed prior to excavation so as to leave the street surface smooth. Disturbed unpaved areas shall be leveled, seeded and mulched.
6. Non-emergency excavations shall occur from 8:30 AM to 4:00 PM week days. There shall be a 48 hour maximum "open time" for excavations before temporary or permanent patch is made. All openings shall be closed and the street opened for traffic by 4:00 PM daily.
7. Where it is necessary to leave an excavation open, such as for concrete curing in the bottom of manholes, a cover shall be provided and set over the opening that will support any load that may pass over the hole.
8. When an emergency occurs that requires excavation within City Right-of-Way and City offices are closed, the work may be done but the City shall be notified immediately when offices are re-opened.
9. When concrete patches are completed, the excavation permit number and date shall be imprinted in the surface of the patch.
10. If saw cut is within two feet of an existing pavement joint, pavement replacement shall be made over to that joint.
11. Patch depth of concrete and new base shall match existing section or 11 inches minimum whichever is greater.

**City of Cape Girardeau - Development Services**  
City Standard Details

---

**Notes:**
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. No portion of the driveway flare or radius shall extend onto adjacent property frontage.
3. A minimum driveway throat length is measured between the parking lot and the curb line which shall be required for multi-family, commercial, and industrial driveways as described in the City Code.
4. Industrial driveways shall be designed for site specific conditions and be constructed with an ADA Compliant sidewalk crossing whether or not a sidewalk connection is made.
5. All industrial driveways within City Right-of-Way shall be seven inch thick concrete minimum with four inches of Type 5 or 7 aggregate base.
6. Fifty foot minimum corner clearance is required for Local and Collector streets as measured from the intersection of the tangent lines of the corner radius. See City Code for Arterial streets.

[Stamp: STATE OF MISSOURI  
PROFESSIONAL ENGINEER  
PB-2010018549]
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. All Commercial driveways within City Right-of-Way shall be seven inch thick concrete minimum with four inches of Type 5 or 7 aggregate base.
3. All driveways shall be constructed with an ADA Compliant sidewalk crossing whether or not a sidewalk connection is made.
4. Driveway grade within the City Right-of-Way shall not exceed twelve percent, excluding the sidewalk crossing surface.
5. The driveway approach may have either a radius or a flare. The maximum radius shall be 25 feet. This driveway design is intended for low to moderate peak hour volumes. Driveways with higher volumes shall be engineered to accommodate traffic flow needs.
6. Isolation joints of 3/4" preformed fiber expansion joint filler shall be provided at the Right-of-Way line. See Standard Specifications for additional joint requirements at locations where "Street Creep" may be a potential issue. See APL for fiber filler and joint sealer.
7. Drill and epoxy #4 x 18" long deformed bars on 18" centers.
8. 8.33% maximum slope for sidewalk ramps.

Commercial Driveway with Green Area (Curbed or Flared)
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. All Residential driveways within City Right-of-Way shall be six inch thick concrete minimum with four inches of Type 5 or 7 aggregate base.
3. All driveways shall be constructed with an ADA Compliant sidewalk crossing whether or not a sidewalk connection is made.
4. Driveway grade within the City Right-of-Way shall not exceed twelve percent, excluding the sidewalk crossing surface.
5. The driveway approach may have either a radius or a flare. The maximum radius shall be 15 feet, this driveway design is intended for low to moderate peak hour volumes. Driveways with higher volumes shall be engineered to accommodate traffic flow needs.
6. Driveways for duplex units with two double garages can be spaced less than ten feet apart provided that the combined width (including the space between driveways) does not exceed 30 feet.
7. Isolation joints of 3/4" preformed fiber expansion joint filler shall be provided between driveway slab and street and at the Right-of-Way line. See Standard Specifications for additional joint requirements at locations where "Street Creep" may be a potential issue. See APL for fiber filler and joint sealer.
8. Drill and epoxy #4 x 18" long deformed bars on 18" centers.

Residential Driveway with Green Area (Radius or Flared)
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. All Commercial driveways within City Right-of-Way shall be seven inch thick concrete minimum with four inches of Type 5 or 7 aggregate base.
3. All Residential driveways within City Right-of-Way shall be six inch thick concrete minimum with four inches of Type 5 or 7 aggregate base.
4. All driveways shall be constructed with an ADA Compliant sidewalk crossing whether or not a sidewalk connection is made.
5. Driveway grade within the City Right-of-Way shall not exceed twelve percent, excluding the sidewalk crossing surface.
6. Isolation joints of 3/4" preformed fiber expansion joint filler shall be provided between driveway slab and street and at the Right-of-Way line. See Standard Specifications for additional joint requirements at locations where "Street Creep" may be a potential issue. See APL for fiber filler and joint sealer.
7. Drill and epoxy #4 x 18" long deformed bars on 18" centers.

**Driveway with 4" Lip Curb**

Prepared By: JH  Scale: NTS  Revisions:  
Checked By: TR - DW - JL  
Date: 02-25-2016  Page 24
Notes:

1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Curb ramps shall be constructed to the dimensions and finished elevations as specified in the plans and/or contract documents and shall also conform to the requirements of the Americans with Disabilities Act (ADA) and Public Rights-of-Way Accessibility Guidelines (PROWAG).
3. Surface texture of the curb ramp shall be stable, firm, and slip-resistant. The surface shall be medium broomed finish transverse to the slope of the ramp.
4. Care shall be taken to assure an uniform grade on the curb ramp.
5. Longitudinal and transverse joint markings shall not be allowed on the landings or ramps.

Perpendicular Curb Ramps

Prepared By: JH  Scale: NTS  Revisions:
Checked By: TR - DW - JL
Date: 02-25-2016  Page 28
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. All pavement markings shall be epoxy paint and conform to the Missouri Standard Specifications for Highway Construction, latest edition.
3. Bicycle and arrow are considered one marking.
4. Markings shall be placed ten feet after an intersection and spaced at intervals approximately 500 feet thereafter.
5. Bicycle lane markings shall not be placed in a driveway. If a marking falls in a driveway, the marking shall be moved to the nearest edge of the driveway.
6. Normal white line shall be six inches wide, solid white.
7. Dotted line for bus stops shall be striped white with dashes six inches wide and two feet long with six feet of space between dashes.

Bicycle Lane Striping
Prepared By: JH Scale: NTS Revisions:
Checked By: TR - DW - JL
Date: 02-25-2016 Page 29
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. All pavement markings shall be epoxy paint and conform to the Missouri Standard Specifications for Highway Construction, latest edition.
3. Bicycle and chevrons are considered one marking.
4. Markings shall be placed ten feet after an intersection and spaced at intervals approximately 250 feet thereafter.
5. Sharrow markings shall not be placed in a driveway. If a marking falls in a driveway, the marking shall be moved to the nearest edge of the driveway.
6. Sharrows shall be positioned so that the centers of the markings are placed in the center of the travel lane.

Minimum Bending Radius for Polyethylene Water Pipe
FIRE HYDRANT INSTALLATION

Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Hydrants shall be oriented with the pumper outlet perpendicular to the curb which faces the street.
3. The center of a hose outlet shall not be less than 18 inches above final grade and so that the final hydrant installation is compatible with the final grade elevation and plumb.
4. A clearance space of at least three feet (3 ft.) surrounding the hydrant body shall be provided around every hydrant.
5. Utility poles, vaults, walls, plants, and other landscape materials shall be kept outside the hydrant's clearance space.
6. Bedding for DI, PVC, and HDPE Pressure Pipe to be flat bottom trench, backfill as shown (except for special backfill areas designated by specifications; i.e. driveways, streets, sidewalks, etc.).
Material:
1. Concrete Straddle Block

Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Concrete shall have 28 day minimum strength of 4000 PSI.
3. For pipe sizes larger than 12 inches straddle blocks shall be designed individually by the Engineer and shall be based on the following:
   a. 200 PSI Water pressure
   b. Soil bearing capacity, steel size, and spacing by the Engineer.
4. Bearing area of block shall be against undisturbed soil.
5. Straddle Block and pipe shall have a minimum of 18" cover.
6. All fittings within the concrete shall be wrapped in plastic.
7. Joint restraint devices shall be used in lieu of thrust blocks at all vertical bend locations (down bends and up bends). The devices shall extend a minimum of three pipe joints (57 feet) each direction for the bend or as otherwise directed in the manufacturer's recommendations.
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. See specifications for aggregate, initial backfill, and trench backfill.

Page 40
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Manhole structures shall be precast and conform to ASTM C478, except as modified by the specifications.
3. The pipe gasket for precast manholes with boxouts shall be watertight flexible rubber gasket or a waterstop between pipe and wall completely grouted with non-shrinking grout, per APL.
4. Asphalt waterproofing on exterior surface of manhole shall not come in contact with pipe gasket.
5. When a manhole is used for storm sewer a watertight flexible rubber gasket is not required.
6. Outlet pipe invert shall be 0.1 foot lower than the lowest inlet pipe.
7. Pipe may project one inch maximum past inside wall of manhole.

Standard Sanitary Manhole with Frame and Lid

CONCRETE ENCASEMENT SHALL EXTEND A MINIMUM OF 6' ABOVE TEE.
WATERTIGHT FLEXIBLE GASKET, PER APL

STANDARD TEE FITTING

CONCRETE ENCASEMENT SHALL EXTEND TO THE BELL OF THE TEE FITTING

ELBOW
WATERTIGHT FLEXIBLE GASKET, PER APL

MANHOLE SLAB
AGGREGATE BEDDING / TRENCH BACKFILL
UNDISTURBED EARTH

SECTION DETAIL AT DROP

NOTES:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Manhole structures shall be precast and conform to ASTM C478, except as modified by the specifications.
3. Use Drop Manhole if elevation difference of inflow and outflow is greater than two feet.
4. Outlet pipe invert shall be 0.1 foot lower than the lowest inlet pipe.
5. Drop inlet pipe to be same size and material as sewer main.
6. Alignment of tee: Drop inlet pipe and elbow may be adjusted to maximum of 5% deflection to compensate for slope of sewer line.

CONTINUOUS CONCRETE ENCASEMENT

Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Where "A" is greater than 12" no concrete encasement is required use Type 5 compacted base between pipes per specs.
3. Where "A" is 12" or less use standard concrete sewer cradle on existing sewer pipe.
4. All pipe are sewer carriers. If any pipe is a water carrier see Water Main specifications.

Pipe Crossing and Continuous Encasement

Prepared By: JH   Scale: NTS   Revisions:
Checked By: TR - DW - JL
Date: 02-25-2016   Page 44
Notes:
1. All work shall be done in accordance with the latest edition of the City of Cape Girardeau Standard Specifications.
2. Do not scale drawing, follow dimensions.
3. Carrier pipe material shall be SDR 35 PVC or DIP.
4. Steel casing pipe used in the installation must have a minimum yield strength of 36,000 PSI.
5. Steel casing pipe shall have a minimum wall thickness as indicated on the table.
6. All joints in the casing pipe shall be welded and coated with bituminous based product, per APL.
7. Polyethylene spacers shall be placed every ten feet along the carrier pipe and two at every joint or as otherwise specified by the manufacturer.
